LASER DIODO 808

L'energia laser a diodi penetra gli strati superiori della pelle e trasferisce la sua energia ai capelli. L'energia assorbita dalla melanina nei capelli è convertita in calore, che danneggiano e rendono duraturo il follicolo pilifero, senza danneggiare il tessuto circostante per evitare permanentemente la ricrescita dei capelli.

2 Bar Lasertel militare importato dagli Stati Uniti, garanzia fino a 50.000.000 scatti.

3 Dimensioni spot 15x15 mm.

4 Raffreddamento del condensatore TEC, sensazione di ghiaccio durante il trattamento, indolore

5 La pompa importata dalla Germania ha un flusso d'acqua stabile e a basso rumore (4,5-5 l/min)

6 Ha un piccolo touch screen sul manipolo, puoi regolare la potenza e visualizzare la temperatura direttamente attraverso il termostato integrato.

Introduzione del prodotto

Tecnologia di laser picosecondo per produrre istantaneamente un'elevata energia e abbattere efficacemente il pigmento nel tessuto malato, in modo che le particelle di pigmento assorbenti possano assorbire l'energia, gonfiandosi e rompendosi, la parte della crepa diventa una piccola particella e parte di essa viene ingerita dai macrofagi del corpo umano.

Esse vengono espulse attraverso il sistema linfatico affinché il pigmento possa essere eliminato. Dal momento che il tessuto normale non assorbe il laser di una lunghezza d'onda fissa, l'immunità del telaio cellulare viene mantenuta e non c'è nessuna condizione per la formazione di cicatrici.

● **532nm**

Used in red, orange, yellow, green, blue and purple tattoos and pigments

● **1064nm**

Used in black, dark blue, grey and darkgrey tattoos and pigments

● **No scars
532nm**

Used in red, orange, yellow, green, blue and purple tattoos and pigments

1 Terapia della pressione dell'aria + riscaldamento INFR + EMS-3 tecnologie combinate affinché siano efficaci per la modellazione del corpo, per il metabolismo e per la disintossicazione.

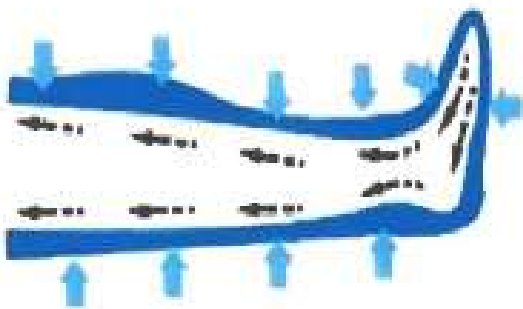

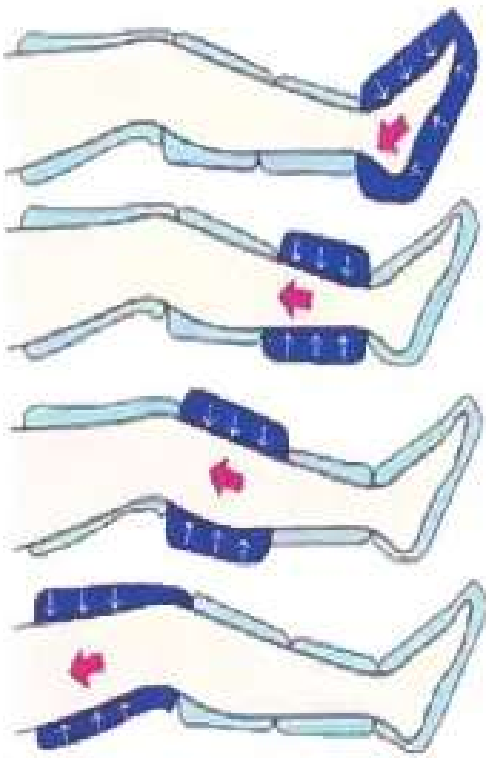

2 2,20 pezzi di airbag; trattamento su quasi tutto il corpo.

3 Drenaggio linfatico multifunzionale, dimagrimento del corpo, riduzione del dolore e dell'affaticamento

5 Tempo di gonfiaggio e sgonfiaggio regolabile; più comodo da usare.

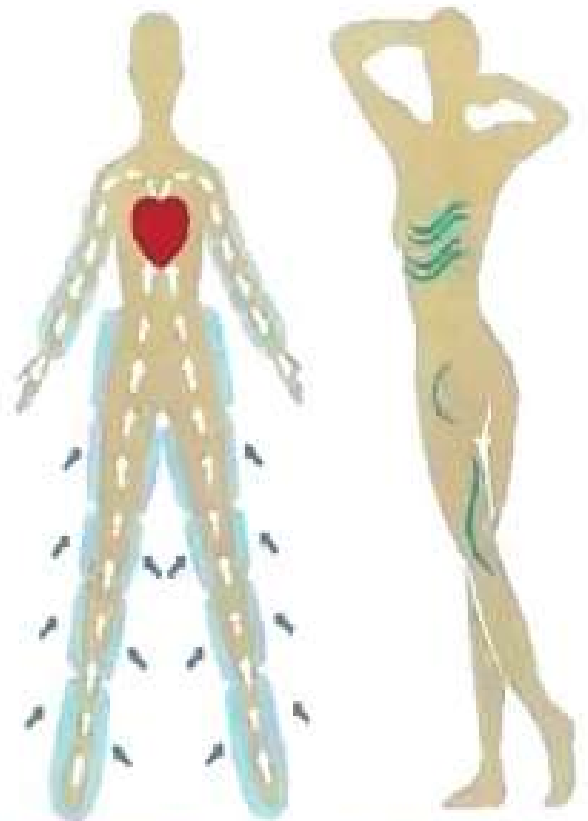

PRINCIPLE

The lymphatic detoxification slimming machine is known as the human body "scavenger", mainly within the circulatory system of the human body. The inner recycle including: the blood circulatory system, the lymphatic circulatory system and tissue fluid, etc. The air inflation by the air bag tie customers' abdomen, arms, legs lymphatic at inflated circulation to a certain period of time and deflated, prompting within the circulatory system to speed up the cycle in the human body, in order to achieve detoxification slimming, endocrine regulation.

ADVANTAGE

This apparatus was carefully designed according to human bionice research, which combines functions of broken-fat, fat dissolved, lymphatic drainage, magnetic therapy of firm skin in one and using high-tech means to massage, do electrotherapy and pressure therapy to get significant effect.

Non-surgical
Hot spot of non-surgical medical cosmetic technologies

Advanced
More advanced than liposuction

Timesaving
More save a way to reduce fat layer compare to RF and ultrasound fat-dissolving technology

Selectivity
Non-invasive way to eliminate waste fat in waist, back and cellulite selectivity

01

Ergonomic features the probes match every inch of skin.

02

Ergonomic probe designed specially for handle.

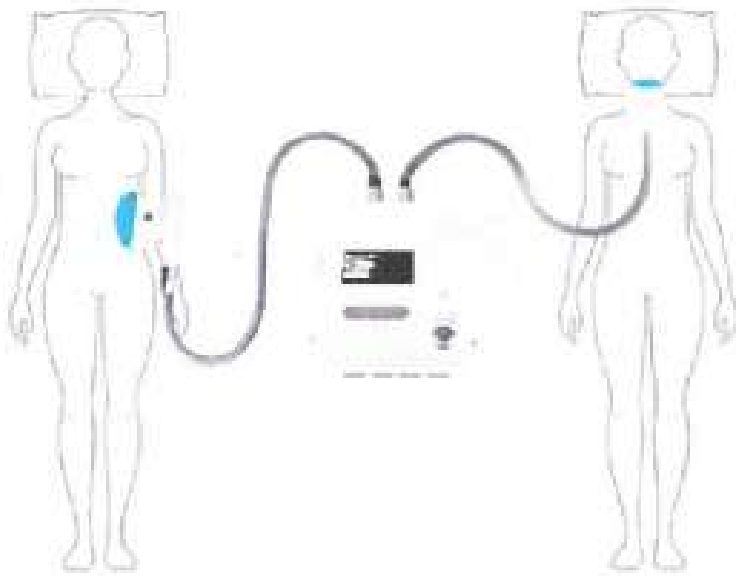

03

Vacuum pressure can be adjusted by the feeling of the customers.

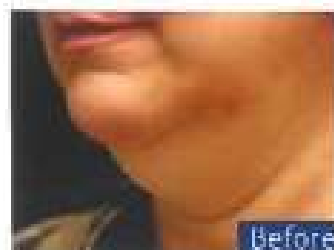

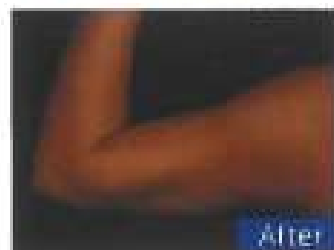

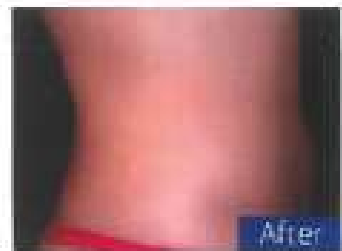

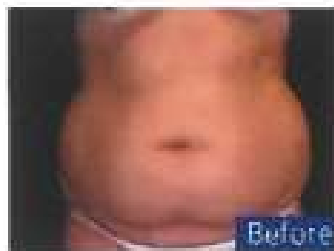

CRIOLIPOLISI

LE FUNZIONI DEL TRATTAMENTO

① Beauty Salon Use, two customers can be treated with a chin handle and a body handle on different parts of the body, Not boring during treatment.

② Homeuse, You can use chin handle and one of body handles at the same time, Save time.

OXIGEN MULTIFUNZIONE 7 in 1

Modello 2025

Nuova macchina per il trattamento del viso, blu ghiaccio, intelligente, macchina per microdermoabrasione portatile professionale, multifunzione 7 in 1.

Freezing fat dissolving technology

Shaping robot

High Intensity Focused Electromagnetic energy;

Burn fat & Exercise muscles

The probe of the shaping robot uses High pulse technology to directly stimulate motor neurons, making nearly 100% of muscle fibers in active state, effectively burning fat square cells, and expelling them through metabolism; At the same time, it can rapidly increase muscle tissue and density, quickly strengthen muscles, and make users easily have perfect abdominal muscles and mermaid lines.

Shaping robot

Combining the previous mature technology to further update and upgrade, the high intensity focused electrical energy (high pulse) enables users to slim down and shape. On the other hand, through the combination of 360° freezing technology and high intensity electromagnetic muscle trainer technology, autologous muscle can achieve the ultimate training of continuous expansion and contraction, thus promoting the growth of myofibrils (muscle enlargement), producing new protein chains and muscle fibers (muscle hyperplasia) and increasing muscle density and volume.

To ensure the process accuracy, a new generation of robot controller is adopted, which integrates the main controller, safety control, power management, external communication interface of the robot, braking circuit and other modules. Compared with the traditional manual control handle, it greatly improves the operation accuracy and continuous stability.

● Lightweight, flexible and intelligent operation

● Increase muscle mass

● High intensity pulsed magnetism

● Frozen fat dissolving, shaping
